DETAILED ACTION

Applicant's amendment and arguments filed on 18 August 2006 have been fully considered. Claims 1-15 are therefore allowed with the additional limitations included.

Examiner's Statement Of Reasons For Allowance

The following is an examiner's statement of reasons for allowance:

The prior art of record in this application fails to disclose or reasonably suggest a method of iteratively optimizing a design function for a grating structure including all of the limitation steps as claimed. More specifically, the prior art fails to teach obtaining multiple design functions, the second function derived from a first function having a reduced maximum amplitude, determining a second response from the second function and replacing the selected parts of the second function to derive a third function, generating a third response from the third function and repeating these steps until the claimed quality criteria is met.

A close prior art of record is U.S. Patent 6,823,111 to Jette et al. Jette et al discloses forming a waveguide grating including the method steps of deriving a first function using specific parameters, obtaining a complex effective refractive index to form a response and then repeating these steps with each modified derived parameters to form the desired grating characteristics. But Jette et al fails to teach modifying the parameters of the grating by reducing a maximum amplitude and applying predetermined spatial characteristics in order to determine each function. Furthermore, Jette et al does not teach obtaining more than 2 modified parameters.

Therefore, claims 1-15 are allowed.
